

- > Machine Add
- > setting
- >expert
- >network
- >Adapter 1 ->attached to 'NAT Network '
- >Adapter 2->attached to 'Host-only Adapter'
- (Now repeat process for 2 machine)

Now start machine both
> now open terminal in both OS

Now commands to run in both vm

- > sudo apt install openssh-server
- >sudo systemctl start ssh
- >sudo systemctl status ssh

Now Control +c

- >ip a

Now in Machine 1 (Sender)

- > ping 192.168.56.104 (Reciver Ip machine 2)

Now control +c

- > touch sahil.txt (file name)
- > echo "Hello" >>sahil.txt
- > scp sahil.txt kali@192.168.56.104:/home/kali

Now in machine 2

- > ls

Now see the file

- >cat sahil.txt
